Kaylor Equipment Rental paid \$75 in dividends and \$511 in interest expense. The addition to retained earnings is \$418 and net new equity is \$500. The tax rate is 35 percent. Sales are \$15,900 and depreciation is \$680. What are the earnings before interest and taxes?

A. \$589.46

<u>B.</u> \$1,269.46

- C. \$1,331.54
- D. \$1,951.54
- E. \$1,949.46

Net income = \$75 + \$418 = \$493

Taxable income = \$493/(1 - .35) = \$758.46

Essay Questions

96. Assume you are the financial officer of a major firm. The president of the firm has just stated that she wishes to reduce the firm's investment in current assets since those assets provide little, if any, return to the firm. How would you respond to this statement?

While it is true that current assets provide a low rate of return, those assets are essential to the firm's liquidity. Should the liquid assets be reduced too low, the firm could face a much greater problem than a low rate of return. That problem would be the inability to meet the firm's financial obligations which could even result in a bankruptcy due to a lack of cash flow.

AACSB: Reflective thinking Blooms: Apply Difficulty: 2 Medium Learning Objective: 02-01 The difference between accounting value (or "book" value) and market value. Section: 2.1 Topic: Liquidity 97. As long as a firm maintains a positive cash balance, why is it essential to review the firm's cash flows?

Firms can have positive cash balances because they are using borrowed funds or equity investments. For a firm to be financially healthy over the long-term, it must be able to generate cash internally. Cash flow analysis enables you to determine the sources, and uses, of a firm's cash to evaluate the financial health of the firm and ensure that the firm is generating positive cash flows from its operations.

The managers of a firm wish to expand the firm's operations and are trying to determine the amount of debt financing the firm should obtain versus the amount of equity financing that should be raised. The managers have asked you to explain the effects that both of these forms of financing would have on the cash flows of the firm. Write a short response to this request.

Debt financing will require cash outflows for both interest and principal payments. The interest outflow will be partially offset by a decrease in the cash outflow for taxes. Should the firm accept additional debt, the liquidity of the firm might have to be increased to ensure the debt obligations can be met in a timely manner. On the other hand, equity financing does not create any requirement for future cash outflows as equity does not need to be repaid nor are dividends required. However, if dividends are paid, they would not lower the firm's cash outflow for taxes.

Discuss the difference between book values and market values and explain which one is more important to the financial manager and why.

The accounts on the balance sheet are generally carried at historical cost, not market values. Although the book value of the current assets and the liabilities may closely approximate market values, the same cannot be said for the rest of the balance sheet accounts. Market values are more relevant as they reflect today's values whereas the balance sheet reflects historical costs as adjusted by various accounting methods. To determine the current value of a firm, and its worth to the shareholders, financial managers must monitor market values.

Student answers will vary but here are some examples:

1) operating cash flow - Is the firm generating positive cash flow from its current operations?

2) cash flow to creditors - Is the firm currently repaying debt or is it assuming additional debt?

3) net working capital - Is the firm increasing or decreasing its net working capital and what effect, if any, is this having on the firm's liquidity?

4) cash flow to stockholders - Is the firm currently paying any dividends to its shareholders and are those shareholders investing additional capital into the firm?

5) net capital spending - Is the firm currently investing in additional fixed assets?
