Chapter 02 Test Bank KEY

1. Visible light, radio waves, microwave radiation, infrared, ultraviolet radiation, X-rays, and gamma rays all constitute the electromagnetic spectrum. Which of the following characteristics do all of these kinds of radiation share?

A. They all have the ability to generate heat in objects.
B. They all have the same frequencies.
C. They are all the transmission of energy in the form of waves.
D. They have equal energies.
E. They have the same electron spin state.
