Subjective Short Answer

Critical Thinking Questions

Case 1-1

Joe has been asked to create a Special Projects database for his company. The database is to track employees and the special projects to which the employees may be assigned. A special project can have between 2 and 5 employees assigned to it. He has determined that he needs the following tables:

Employee (Social Security Number, Last Name, First Name, Street Address, City, State,
Postal Code, Hourly Pay Rate, Project Code)

Project (Project Code, Project Name, Total Hours, Completion Date)

72. Which field in the Employee table should be the primary key and why?

ANSWER: Social Security Number should be the primary key because the values in the field will be unique for each record.

POINTS: 1

174. A personal computer designed to be in a stationary location

ANSWER: g

POINTS: 1

175. A computer dedicated to providing one or more services to other computers or devices on a network

ANSWER: k

POINTS: 1

176. A computing device small enough to hold in your hand

ANSWER: l

POINTS: 1

177. An internet-capable phone that usually also includes a calendar, an appointment book, an address book, a calculator, notepad, games, and several other apps

ANSWER: h

POINTS: 1

178. Any hardware component that allows you to enter data and instructions into a computer or mobile device

ANSWER: j

POINTS: 1

179. Any hardware component that conveys information from a computer or mobile device to one or more people

ANSWER: i

POINTS: 1

180. Where a computer keeps data, instructions, and information

ANSWER: a

POINTS: 1

181. Removable flash memory

ANSWER: s

POINTS: 1

182. A worldwide collection of computer networks that connects millions of businesses, government agencies, educational institutions, and individuals

ANSWER: t

POINTS: 1

183. One of the more widely used Internet services

ANSWER: r

POINTS: 1

184. A storage device that typically uses flash memory to store data, instructions, and information

ANSWER: b

POINTS: 1

Chapter 01: Introducing Today's Technologies

185. A named collection of stored data, instructions, or information

ANSWER: d

POINTS: 1

186. A website that encourages members to share their interests, ideas, stories, photos, music, and videos with other users

ANSWER: q

POINTS: 1

187. A series of related instructions, organized for a common purpose, that tells the computer what tasks to perform and how to perform them

ANSWER: c

POINTS: 1

188. Software that finds websites, webpages, images, videos, news, maps, and other information related to a specific topic

ANSWER: p

POINTS: 1

189. Software that enables users with an Internet connection to access and view webpages on a computer or mobile device

ANSWER: e

POINTS: 1

Subjective Short Answer

190. You want to display a shortcut menu in order to quickly show you all of the possible actions at a particular moment in your use of the tablet. Which of the following gestures does the tutorial tell you to use?

a. tap	c. press and hold
b. pinch	d. swipe

Essay

194. Explain what the World Wide Web is, including several tasks that can be accomplished online. Include definitions of the following terms in your response: webpage, downloading, website, and web server.

ANSWER: Student responses will vary, but should be drawn from the following information from the text.

The World Wide Web (or web, for short) is a global library of information available to anyone connected to the Internet. People around the world access the web to accomplish a variety of online tasks, including:

Chapter 01: Introducing Today's Technologies

- Search for information
- Conduct research
- Communicate with and meet other people
- Share information, photos, and videos with others
- Access news, weather, and sports
- Participate in online training
- Shop for goods and services
- Play games with others
- Download or listen to music
- Watch videos
- Download or read books
- Make reservations

The web consists of a worldwide collection of electronic documents. Each electronic document on the web is called a webpage, which can contain text, graphics, audio, and video.

Webpages often contain links. A link, short for hyperlink, is a built-in connection to other documents, graphics, audio files, videos, webpages, or websites. To activate an item associated with a link, you tap or click the link. A text link often changes color after you tap or click it to remind you visually that you previously have visited the webpage or downloaded the content associated with the link.

Links allow you to obtain information in a nonlinear way. That is, instead of accessing topics in a specified order, you move directly to a topic of interest. Some people use the phrase surfing the web to refer to the activity of using links to explore the web.

A website is a collection of related webpages, which are stored on a web server. A web server is a computer that delivers requested webpages to your computer or mobile device.

195. List at least five different practices to adopt in order to protect your computer from viruses and other malware.

ANSWER: Student responses will vary, but should be drawn from the following information from the text.

Although it is impossible to ensure a virus or malware never will attack a computer, you can take steps to protect your computer by following these practices:

- Use virus protection software. Install a reputable antivirus program and then scan the entire computer to be certain it is free of viruses and other malware. Update the antivirus program and the virus signatures (known specific patterns of viruses) regularly.
- Use a firewall. Set up a hardware firewall or install a software firewall that protects your network's resources from outside intrusions.

Chapter 01: Introducing Today's Technologies

- Be suspicious of all unsolicited email attachments. Never open an email attachment unless you are expecting it and it is from a trusted source. When in doubt, ask the sender to confirm the attachment is legitimate before you open it. Delete or quarantine flagged attachments immediately.
- Disconnect your computer from the Internet. If you do not need Internet access, disconnect the computer from the Internet. Some security experts recommend disconnecting from the computer network before opening email attachments.
- Download software with caution. Download programs or apps only from websites you trust, especially those with music and movie sharing software.
- Close spyware windows. If you suspect a pop-up window (rectangular area that suddenly appears on your screen) may be spyware, close the window. Never click an Agree or OK button in a suspicious window.
- Before using any removable media, scan it for malware. Follow this procedure even for shrink-wrapped software from major developers. Some commercial software has been infected and distributed to unsuspecting users. Never start a computer with removable media inserted in the computer unless you are certain the media are uninfected.
- Keep current. Install the latest updates for your computer software. Stay informed about new virus alerts and virus hoaxes.
- Back up regularly. In the event your computer becomes unusable due to a virus attack or other malware, you will be able to restore operations if you have a clean (uninfected) backup.

196. List at least four guidelines for creating strong passwords.

ANSWER: Student responses will vary, but should be drawn from the following information from the text.

A good password is easy for you to remember but difficult for criminals and password-breaking software to guess. Use these guidelines to create effective, strong passwords:

- Personal information: Avoid using any part of your first or last name, your family members' names, phone number, street address, license plate number, Social Security number, or birth date.
- Length: Use at least eight characters.
- Difficulty: Use a variety of uppercase and lowercase letters, numbers, punctuation, and

Chapter 01: Introducing Today's Technologies

symbols. Select characters located on different parts of the keyboard, not the ones you commonly use or that are adjacent to each other. Criminals use software that converts common words to symbols, so changing the word, two, to the numeral, 2, or the word, and, to the ampersand symbol, &, is not likely to foil a thief.

- **Modify:** Change the password frequently, at least every three months.
- **Variation:** Do not use the same password for all accounts. Once criminals have stolen a password, they attempt to use that password for other accounts they find on your computer or mobile device, especially banking websites.
- **Passphrase:** A passphrase, which is similar to a password, consists of several words separated by spaces. Security experts recommend misspelling a few of the words and adding several numerals. For example, the phrase, "Create a strong password," could become the passphrase, "Creaet a strang pasword42."
- **Common sequences:** Avoid numbers or letters in easily recognized patterns, such as "asdfjkl;," "12345678," "09870987," or "abcdefg." Also, do not spell words backwards or use common abbreviations.
- **Manage:** Do not keep your passwords in your wallet, on a sheet of paper near your computer, or in a text file on your computer or mobile device. Memorize all of your passwords, or store them securely using a password management app on your computer or mobile device.
- **Test:** Use online tools to evaluate password strength.

197. List the steps to locate, install, and then run a program or mobile app.

ANSWER: Student responses will vary, but should be drawn from the following information from the text.

The following steps describe how to locate, install, and run an app on a mobile device:

- **Locate the program or mobile app to install.** Programs are available from retail stores, websites, and from other online services such as Apple's App Store or Google Play. Mobile apps are available from your device's app store.

Download and/or Install the Program or Mobile App

- **If you are installing a program on your computer from physical media such as a CD or DVD,** insert the media in your computer. If the installation process does not start automatically, locate the installation program on the media and then double-tap or double-click the installation

Chapter 01: Introducing Today's Technologies

program.

- If the program or mobile app is available from a website or online store, download the application to your computer or mobile device. Once the download is complete, if the installation process does not start automatically, locate and then double-tap or double-click the downloaded file to begin the installation.

Run the Program or Mobile App

You have various options for running a program or mobile app:

- If you are using a computer, tap or click the program's tile or double-tap or double-click the program's icon in the desktop.
- Display a list of all programs and apps on your computer or mobile device and then tap or click the icon representing the program to run (some computers may require you to double-tap or double-click the icon).
- Use the search feature in the operating system to locate the newly installed program or app and then tap or click the search result to run the program or app.

198. List and describe the three main examples of wireless communications technologies described in the chapter.

ANSWER:

Student descriptions will vary but they should touch on the three technologies listed below:

- Wi-Fi uses radio signals to provide high-speed Internet and network connections to computers and devices capable of communicating via Wi-Fi. Most computers and many mobile devices, such as smartphones and portable media players, can connect to a Wi-Fi network.
- Bluetooth uses short-range radio signals to enable Bluetooth-enabled computers and devices to communicate with each other. For example, Bluetooth headsets allow you to connect a Bluetooth-enabled phone to a headset wirelessly.
- Cellular radio uses the cellular network to enable high-speed Internet connections to devices with built-in compatible technology, such as smartphones. Cellular network providers use the categories 3G, 4G, and 5G to denote cellular transmission speeds, with 5G being the fastest.

199. Explain in detail what it means to synchronize computers and mobile devices. Include at least two strategies for keeping your files in sync in your answer.

ANSWER: Student responses will vary, but should be drawn from the following information from the text.

If you use multiple computers and mobile devices throughout the day, keeping track of common files may be difficult. For example, each morning, you may begin the day by checking your appointment calendar on your computer. That same calendar appears on your smartphone, so that you can view your schedule throughout the day. You may, however, add, change, or delete appointments using the smartphone, so when you return home you will need to update the calendar on your computer to reflect these edits. When you synchronize, or sync, computers and mobile devices, you match the files in two or more locations with each other, as shown in the figure below. Along with appointments, other commonly synced files from a smartphone are photos, email messages, music, apps, contacts, calendars, and ringtones.

Syncing can be a one-way or a two-way process. With a one-way sync, also called mirroring, you add, change, or delete files in a destination location, called the target, without altering the same files in the original location, called the source. For example, you may have a large collection of music stored on your computer at home (the source), and you often copy some of these songs to your mobile device (the target). If you add or delete songs from your computer, you also will want to add or change these songs on your mobile device. If, however, you add or change the songs on your mobile device, you would not want to make these changes on your computer.

In two-way sync, any change made in one location also is made in any other sync location. For example, you and your friends may be working together to create one document reflecting your combined ideas. This document could be stored on a network or on cloud storage on the Internet. Your collaboration efforts should reflect the latest edits each person has made to the file.

You can use wired or wireless methods to sync. In a wired setup, cables connect one device to another, which allows for reliable data transfer. While wireless syncing offers convenience and automation, possible issues include battery drain and low signal strength when the devices are not close to each other.

Strategies for keeping your files in sync include the following:

- Use a cable and software. Syncing photos from a camera or a smartphone to a computer frees up memory on the mobile device and creates a backup of these files. You easily can transfer photos using a data sync cable and synchronization software. Be certain not to disconnect the mobile device from the computer until the sync is complete. You also can copy your photos and documents from the computer to a smartphone, an external hard disk, a USB flash drive, or some other portable storage device.
- Use cloud storage. Cloud storage can provide a convenient method of syncing files stored on multiple computers and accessing them from most devices with Internet access. Several cloud storage providers offer a small amount of storage space at no cost and additional storage for a nominal fee per month or per year. Each provider has specific features, but most

Name: _____ Class: _____ Date: _____

Chapter 01: Introducing Today's Technologies

allow users to share files with other users, preview file contents, set passwords, and control who has permission to edit the files.

- Use web apps. By using web apps for email, contacts, and calendars, your information is stored online, so that it is accessible anywhere you have an Internet connection, and can sync with multiple devices.
