## CHAPTER LEARNING OBJECTIVES

1. **Identify the sections of a classified balance sheet.** In a classified balance sheet, companies classify assets as current assets; long-term investments; property, plant, and equipment; and intangibles. They classify liabilities as either current or long-term. A stockholders' equity section shows common stock and retained earnings.
2. **Use ratios to evaluate a company's profitability, liquidity, and solvency.** Ratio analysis expresses the relationship among selected items of financial statements data. Profitability ratios, such as earnings per share (EPS), measure aspects of the operating success of a company for a given period of time.

Liquidity ratios, such as the current ratio, measure the short-term ability of a company to pay its maturing obligations and to meet unexpected needs for cash. Solvency ratios, such as the debt to assets ratio, measure the ability of a company to survive over a long period.

Free cash flow indicates a company's ability to generate cash from operations that is sufficient to pay debts, acquire assets, and distribute dividends.

- (a) Comment on the relative profitability of the companies by computing the net income and earnings per share for each company for 2017.
- (b) Comment on the relative solvency of the companies by computing the debt to assets ratio and the free cash flow for each company for 2017.

Ans: N/A, LO: 2, Bloom: AN, Difficulty: Medium, Min: 15, AACSB: Analytic, AICPA BB: Legal/Regulatory Perspective, AICPA FC: Reporting, AICPA PC: Problem Solving, IMA: Business Economics

**Solution 130** (15 min.)

- (a) Arthur Company appears to be more profitable.  
 Its net income for 2017 is \$228,000 ( $\$1,850,000 - \$1,225,000 - \$303,000 - \$9,000 - \$85,000$ ). Its earnings per share is \$2.28 ( $\$228,000 \div 100,000$  shares outstanding). Lancelot's net income for 2017 is \$116,400 ( $\$620,000 - \$365,000 - \$98,000 - \$3,800 - \$36,800$ ). Its earnings per share is \$2.33 ( $\$116,400 \div 50,000$  shares outstanding).
- (b) Arthur appears to be slightly more solvent. Arthur's 2017 debt to assets ratio of 22.4% ( $\$214,825 \div \$959,200$ )<sup>a</sup> is lower than Lancelot's ratio of 24.1% ( $\$64,968 \div \$270,064$ )<sup>b</sup>. The lower the percentage of debt to assets, the lower the risk that a company may be unable to pay its debts as they income due.

Another measure of solvency, free cash flow, also indicates that Arthur is more solvent. Arthur had \$27,000 ( $\$153,000 - \$90,000 - \$36,000$ ) of free cash flow while Lancelot had only \$9,000 ( $\$44,000 - \$20,000 - \$15,000$ ).

<sup>a</sup>\$214,825 ( $\$66,325 + \$148,500$ ) is Arthur's 2017 total liabilities  
\$959,200 ( $\$427,200 + \$532,000$ ) is Arthur's 2017 total assets.

<sup>b</sup>\$64,968 ( $\$35,348 + \$29,620$ ) is Lancelot's 2017 total liabilities  
\$270,064 ( $\$130,336 + \$139,728$ ) is Lancelot's 2017 total assets.

Current liabilities	7,966	13,950
Total liabilities	16,136	29,222
Average common shares outstanding	250	480
Preferred stock dividends paid	-0-	-0-

**Instructions**

- (a) For each company, compute the following ratios:
1. Current ratio
  2. Debt to assets ratio
  3. Earnings per share
- (b) Based on your calculations, discuss the relative liquidity, solvency, and profitability of the two companies.

Ans: N/A, LO: 2, Bloom: AP, Difficulty: Medium, Min: 12, AACSB: Analytic, AICPA BB: Legal/Regulatory Perspective, AICPA FC: Reporting, AICPA PC: Problem Solving, IMA: Business Economics

**Solution 132** (12 min.)

(a)	<u>Marin</u>	<u>Nance</u>
1. Current ratio (Cur. assets/Cur. liab.)	1.72:1 ( \$13,712 ÷ \$7,966)	2.04:1 (\$28,447 ÷ \$13,950)
2. Debt to assets ratio (Tot. liab. ÷ Tot. assets)	73% (\$16,136 ÷ 22,088)	81% (\$29,222 ÷ \$36,167)
3. Earnings per share (Net. inc. ÷ Ave. sh. out.)	\$2.26 (\$565 ÷ 250)	\$2.54 (\$1,221 ÷ 480)

- (b) Based on the current ratio, Nance is more liquid than Marin since its current ratio (2.04:1) is 19% higher than Marin's ratio (1.72:1). However, Marin would be considered more solvent than Nance since its debt to assets ratio (73%) is 10% lower than Nance's debt ratio (81%). A lower debt to assets ratio indicates a company is more solvent and better able to survive over a long period of time.

Nance is more profitable than Marin since its earnings per share and is higher than Marin's respective values. Nance's earnings per share (\$2.54) is 12.4% higher than Marin's value.

The three parties are not primarily interested in the same characteristics of a company. Short-term creditors are primarily interested in the liquidity of the enterprise. In contrast, long-term creditors and stockholders are primarily interested in the profitability and solvency of the company.

Many bonus plans are based upon the attainment of some specified short-term goal. For example, sales personnel at Metal Crafters are given a bonus of 5% of the amount by which their sales exceed \$100,000. Sometimes the attainment of these goals is achieved by methods detrimental to the long-term needs of the company. Sales representative Sara Crown, for example, finds herself tempted to court certain customers that place large orders, even though she knows they may not be able to pay. She complains that the bonus system itself is unethical.

Is a bonus system like the one at Metal Crafters unethical? Explain.

The bonus system described is not necessarily unethical, but it may be short-sighted. When employees are able to identify and address larger concerns (such as Sara's identification of the problem regarding the ability of a customer to pay) then such issues should probably become part of the system of bonuses. However, it is very difficult to set a bonus plan that allows for all contingencies. Since sales representatives are hired to generate sales, they most often are rewarded based on generating sales. Some of the future events, such as customers defaulting on payments, may not be the fault of the sales representative. For Sara Crown to create sales by soliciting customers with a poor payment record would be unethical on her part. She is required to use integrity, even when the possibility exists of her not using it, and even when she might gain by not using it.
