

Using MIS, 10e (Kroenke)

Chapter 2 Collaboration Information Systems

1) Collaboration is defined as a group of people _____.

- A) coming together to perform tasks that are different
- B) working together to achieve a common goal
- C) performing independent tasks that are important
- D) working without having to critically analyze each other's work
- E) reconciling differences in communication styles

Answer: B

11) Feedback and iteration enable a group to produce something greater than any single person could accomplish by working independently.

Answer: TRUE

Diff: 1

AACSB: Interpersonal Relations and Teamwork; Written and Oral Communication

Course LO: Explain how IS can enhance systems of collaboration and teamwork

LO: 2.1: What are the two key characteristics of collaboration?

Classification: Concept

12) Being a skilled and persuasive presenter is the most important characteristic for an effective collaborator.

Answer: FALSE

Diff: 1

AACSB: Interpersonal Relations and Teamwork; Written and Oral Communication

Course LO: Explain how IS can enhance systems of collaboration and teamwork

LO: 2.1: What are the two key characteristics of collaboration?

Classification: Concept

13) Distinguish between cooperation and collaboration.

Answer: Cooperation is a group of people working together, all doing essentially the same type of work, to accomplish a job. A group of four painters, each painting a different wall in the same room, are working cooperatively. A cooperative group can accomplish a given task faster than an individual working alone, but the cooperative result is usually not better in quality than the result of someone working alone.

Collaboration occurs when a group of people work together to achieve a common goal via a process of feedback and iteration. Using feedback and iteration, one person will produce something, say the draft of a document, and a second person will review that draft and provide critical feedback. Given the feedback, the original author or someone else will then revise the first draft to produce a second. The work proceeds in a series of stages, or iterations.

Diff: 3

AACSB: Interpersonal Relations and Teamwork; Written and Oral Communication

Course LO: Explain how IS can enhance systems of collaboration and teamwork

LO: 2.1: What are the two key characteristics of collaboration?

Classification: Concept

14) Describe the guidelines for giving and receiving constructive criticism.

Answer: For collaboration to be successful, members of a team must provide and receive constructive criticism. A group in which everyone is too polite to say anything critical cannot collaborate. On the other hand, a group that is so critical and negative that members come to distrust, even hate, one another cannot effectively collaborate either. Critical feedback needs to be presented in a friendly, well-reasoned manner. Learning how to effectively give critical feedback takes practice. Giving constructive criticism includes being specific, offering suggestions, avoiding personal comments, and setting positive goals. Accepting constructive criticism includes questioning your emotions, not dominating, and demonstrating a commitment to the group.

Course LO: Explain how IS can enhance systems of collaboration and teamwork

LO: 2.3: What are the four primary purposes of collaboration?

Classification: Concept

57) Define the three levels of decision making with examples.

Answer: Decisions are made at three levels: operational, managerial, and strategic.

1) Operational decisions are those that support operational, day-to-day activities. Typical operational decisions are: How many widgets should we order from vendor A? Should we extend credit to vendor B? Which invoices should we pay today?

2) Managerial decisions are decisions about the allocation and utilization of resources. Typical decisions are: How much should we budget for computer hardware and programs for department A next year? How many engineers should we assign to project B?

3) Strategic decisions are those that support broad-scope, organizational issues. Typical decisions at the strategic level are: Should we start a new product line? Should we open a centralized warehouse in Tennessee? Should we acquire company A?

Diff: 2

AACSB: Interpersonal Relations and Teamwork

Course LO: Explain how IS can enhance systems of collaboration and teamwork

LO: 2.3: What are the four primary purposes of collaboration?

Classification: Concept

58) What is the difference between structured and unstructured decisions? Give an example of each.

Answer: Structured decisions are those where an understood and accepted method for making the decision exists. The process through which financial institutions avail credit is an example of structured decision making.

Unstructured decisions are those where there is no agreed-on decision-making method.

Predicting the future direction of the economy or the stock market is a classic example of unstructured decision.

Diff: 2

AACSB: Analytical Thinking

Course LO: Explain how IS can enhance systems of collaboration and teamwork

LO: 2.3: What are the four primary purposes of collaboration?

Classification: Concept

59) Explain why structured decisions seldom require collaboration.

Answer: A structured decision process is one where there is an understood and accepted method for making the decision. Since the decision process is already understood, there is no reason for collaboration to determine how to make the decision.

AACSB: Analytical Thinking

Course LO: Explain how IS can enhance systems of collaboration and teamwork

LO: 2.3: What are the four primary purposes of collaboration?

Classification: Concept

60) Are most strategic decisions unstructured? Give an example of an unstructured strategic decision.

Answer: Yes, most strategic decisions are unstructured. Since they are made less frequently and generally have a long-term time horizon, most strategic decisions are relatively unstructured. Long-term labor planning comprises unstructured strategic decisions.

Diff: 2

AACSB: Analytical Thinking

Course LO: Explain how IS can enhance systems of collaboration and teamwork

LO: 2.3: What are the four primary purposes of collaboration?

Classification: Concept

61) Briefly describe the starting phase of a project.

Answer: The fundamental purpose of the starting phase is to set the ground rules for the project and the team. In industry, teams need to determine or understand what authority they have. Is the project given to the team? Or is part of the team's task to identify what the project is? Is the team free to determine team membership, or is membership given? Other tasks during the starting phase are to set the scope of the project and to establish an initial budget. It is important to set team member expectations at the outset. What role will each team member play, and what responsibilities and authority will he or she have?

LO: 2.4: What are the requirements for a collaboration information system?

Classification: Concept

68) Describe project data and project metadata.

Answer: Project data is data that is part of the collaboration's work product. For example, for a team that is designing a new product, design documents are examples of project data. A document that describes a recommended solution is project data for a problem-solving project. Project metadata is data that is used to manage the project. Schedules, tasks, budgets, and other managerial data are examples of project metadata. Both types of data are subject to iteration and feedback.

80) One of the advantages of a team survey is that it is easy to determine who has not yet responded.

Answer: TRUE

Diff: 2

AACSB: Information Technology; Written and Oral Communication

Course LO: Explain how IS can enhance systems of collaboration and teamwork

LO: 2.5: How can you use collaboration tools to improve team communication?

Classification: Concept

81) What is the difference between synchronous and asynchronous communications? Provide examples for each.

Answer: Synchronous communications are collaborations where all the team members meet at the same time. Examples include face-to-face meetings, videoconferencing, conference calls, and multiparty chats.

Asynchronous communications occur when team members do not meet at the same time. Emails, discussion forums, and team surveys are examples of asynchronous communication.

Diff: 2

AACSB: Information Technology; Written and Oral Communication

Course LO: Explain how IS can enhance systems of collaboration and teamwork

LO: 2.5: How can you use collaboration tools to improve team communication?

Classification: Concept

82) Describe screen-sharing applications, webinars, and discussion forums.

Answer: Screen-sharing applications enable users to view the same whiteboard, application, or other display. The whiteboard allows multiple people to contribute simultaneously. To organize the simultaneous conversation, the whiteboard real estate is divided among the members of the group. Some groups save their whiteboards as minutes of the meeting.

A webinar is a virtual meeting in which attendees view one of the attendees' computer screens for a more formal and organized presentation. WebEx is a popular commercial webinar application used in virtual sales presentations.

Discussion forums are an alternative to emails. Here, one group member posts an entry, perhaps an idea, a comment, or a question, and other group members respond. Such forums are better than email because it is harder for the discussion to get off track.

Course LO: Explain how IS can enhance systems of collaboration and teamwork

LO: 2.5: How can you use collaboration tools to improve team communication?

Classification: Concept

83) What are team surveys? What are their benefits?

Answer: Team surveys are a form of communication technology. With these, one team member creates a list of questions and other team members respond.

Surveys are an effective way to obtain team opinions. They are generally easy to complete, so most team members will participate. Also, it is easy to determine who has not yet responded.

Answer: TRUE

Diff: 2

AACSB: Information Technology

Course LO: Explain how IS can enhance systems of collaboration and teamwork

LO: 2.7: How can you use collaboration tools to manage shared tasks?

Classification: Concept

98) Explain the importance of using task lists.

Answer: Managing with a task list is critical for making progress. Task descriptions need to be specific and worded so that it is possible to decide whether or not the task was accomplished. In general, one person should be made responsible for accomplishing a task. That does not mean that the assigned person does the task; it means that they are responsible for ensuring that it gets done. No benefit will come from this list unless every task has a date by which it is to be completed. For team members to utilize the task list effectively, they need to share it.
